**HOW TO LOFT YOUR BED**

**#1:** Remove top section of bedframe and put on floor.

**#2:** Adjust bed spring to desired height.

**#3:** Stack bottom section on top. Fit snugly into bed pin.

**#4:** Make sure stabilizer bar* is snugly attached to each bed end, and that bed ends are parallel. Use mallet if need be (request at your main desk.)

**#5.** Bed is now lofted. Stop by your main desk if you need help.

---

*Always use stabilizer bar for safety. If you deloft your bed, stabilizer bar goes at top (see first picture).*
